Calibre kindle welches format

If you specify a non-default value, line heights will be set in all locations that don't specify their own line heights. The first option is Force use of auto-generated Table of Contents. .endnote { text-align: right } or if you want to change the indentation of all paragraphs: Extra CSS is a very powerful option, but you do need an understanding of how CSS works to use it to its full potential. When the input document has a Table of Contents in its metadata, calibre will just use that. Sie können auch den aktuellen Abschnitt in Vorlagen nutzen, wie nachfolgend gezeigt: SECTION_ SECTION_ is replaced by whatever the name of the current section is. calibre uses XPath, a powerful language to allow the user to specify chapter boundaries/page breaks. Beim Umwandeln ... Download Cool Reader eBook-Tools ...Cool Reader" ist ein eBook-Reader für alle gängigen eBook-Formate. Please note that some ornamental characters may not be supported across all reading devices. When converted, this can result in non-English characters or special characters like smart quotes being corrupted. If no picture with this name is found, the 'smart' method is used. Links und Inhaltsverzeichnis werden nicht unterstützt. PDFs that use embedded non-Unicode fonts to represent non-English characters will result in garbled output for those characters. Some PDFs are made up of photographs of the page with OCR'd text behind them. This option will extract the content from the tables and present it in a linear fashion. Since the Bulk conversion dialog does not have settings for these two categories, they will be taken from book specific settings (if any) or the defaults. Normally, calibre will preserve the justification in the original document. The first, most important, setting to check on when converting to PDF is the page size. The second pass analyzes all hyphenated words throughout the document, hyphens are removed if the word exists elsewhere in the document without a match. Die Schriftgrößenkalierung der Konvertierung kann auch deaktiviert werden, falls Sie die Schriftgrößen des Eingabedokuments beibehalten möchten. Diese Option entfernt einfach das erste Bild des Quelldokuments und stellt auf diese Weise sicher, dass das konvertierte Buch nur ein einziges Titelbild hat, und zwar das welches in Calibre angegeben wurde. This is the third. You should use styles to format your document and minimize the use of direct formatting. If that works, then try your format of choice. Use to debug font size conversion and CSS transforms. With power comes complexity, but if once you take the time to learn the complexity, you will find it well worth the effort. Finally, there is Input character encoding. Extraction of vector images and tables from within the document is also not supported. When this option is enabled calibre will attempt to detect this sort of formatting and convert them to a 3% text indent using CSS. This function will not create a TOC, but in many cases it will cause calibre's default chapter detection settings to correctly detect chapters and build a TOC. Meaning, it is very difficult to determine where one paragraph ends and another begins. Use to debug the output plugin. Formatting style: AutoAttempts to detect the type of formatting markup being used. Note that Word produces really messy HTML, converting it can take a long time, so be patient. Because these functions rely on common patterns, be aware that in some cases an option may lead to worse results, so use with care. Use the following HTML markup to achieve this: Chapter 1 chapter 1 text... chapter 2 text... Set the Level 1 TOC setting to /h:h2. This is the second paragraph. If you want to remove the spacing between all paragraphs, except a select few, don't use these options. For older .doc files, you can save the document as HTML with Microsoft Word and then convert the resulting HTML file with calibre. Fortunately, calibre has very powerful options to control this. Calibre hat raffinierte Algorithmen um sicher zu stellen, dass alle ausgegebenen Bücher konsistente Schriftgrößen haben, unabhängig davon welche Schriftgrößen im Quelldokument angegeben sind. The replacement pattern is optional, if left blank then text matching the search pattern will be deleted from the document. Paragraph style: BlockAssumes one or more blank lines are a paragraph boundary: This is the first. Normally, calibre will automatically choose a base font size appropriate to the output profile you have chosen (see Seitenrichtung). These options are useful primarily for conversion of PDF documents or OCR conversions, though they can also be used to fix many document specific problems. If you are generating a PDF to be used on a specific device, you can turn on the option to use the page size from the output profile instead. This option will generally work fine, if you achieve undesirable results try one of the manual options. This will bring up a conversion log that will contain the actual settings used, near the top. The default is 0.45, just under the median line length. Some PDFs use special glyphs to represent ll or ff or fi, etc. If less than the Chapter threshold number of chapters were detected, calibre will then add any hyperlinks it finds in the input document to the Table of Contents. They are a fixed page size and text placement format. Use the Search and replace panel to remove headers and footers to mitigate this issue. Click the magic wand beside the expression box, and click the 'Test' button after composing your search expression. Paragraph style: AutoAnalyzes the text file and attempts to automatically determine how paragraphs are defined. This is the most powerful styling related facility. You can also display text at the left and right edges and change the font size, as demonstrated with this header template: TITLE_ AUTHOR_ Dies wird den Titel auf der linken Seite und den Autor an der rechten Seite anzeigen, in einer Schriftgröße kleiner als der Haupttext. TXT documents have no well defined way to specify formatting like bold, italics, etc, or document structure like paragraphs, headings, sections and so on, but there are a variety of conventions commonly used. This option will create a single page with all this metadata and insert it into the converted e-book, typically just after the cover. There is a wizard to help you customize the regular expressions for your document. If your document only has a few line breaks which need correction, then this value should be reduced to somewhere between 0.1 and 0.2. Detect and markup unformatted chapter headings and sub headings if your document does not have chapter headings and titles formatted differently from the rest of the text, calibre can use this option to attempt to detect them and surround them with heading tags. Examples are common text conventions such as ~word~ or phrases that should generally be italicized, e.g. latin phrases like 'etc.' or 'et cetera'. To enable automatic detection of chapters, you need to mark them with the built-in styles called Heading 1, Heading 2, Heading 6 (Heading 1 equates to the HTML tag , Heading 2 to , etc). When you set the base font size, for best results, you should also set the font size key. abgeschlossen Just before the e-book is passed to the Output plugin. PDF documents are one of the worst formats to convert from. As an example, several of these options will remove all non-breaking-space entities, or may include false positive matches relating to the function. A related setting is Line height. Otherwise, your best bet for modern E-book reading devices is to choose the Generic e-ink HD output profile. Normally, paragraphs in XHTML are rendered with a blank line between them and no leading text indent. You can have it insert a ruled line instead of, or in addition to the page break. During conversion, calibre will place the XHTML generated by the various stages of the conversion pipeline in different sub-folders. By choosing a larger base font size, you can make the fonts in the document larger and vice versa. In addition the .cbc file must contain a simple text file called comics.txt, encoded in UTF-8. If a single PDF page has multiple sections, the first section on the page will be used. The following simple example illustrates how to use these options. In these cases, the options in this section can help you automatically generate a Table of Contents in the converted e-book, based on the actual content in the input document. calibre will try to unwrap paragraphs using a configurable, Line-unwrapping factor. Calibre can automatically convert .docx files created by Microsoft Word 2007 and newer. Der Schriftgrößenklausel ermöglicht Calibre die Schriftgrößen aus den Quelldokumenten in verschiedene Kategorien einzuteilen, die den unterschiedlichen logischen Schriftgrößen entsprechen. Die Idee dahinter ist, dass es eine begrenzte Anzahl an Schriftgrößen in einem Dokument geben sollte. Eines der angenehmsten Merkmale der e-reading

Erfahrung ist die Möglichkeit Schriftgrößen einfach eine individuelle Bedürfnisse und Lichtverhältnisse anpassen zu können. Um zum Beispiel Seitenzahlen zentriert unten auf jeder Seite und in Grün anzuzeigen nutzen Sie die folgende Fußzeilenvorlage: PAGENUM' calibre will automatically replace PAGENUM with the current page number. By checking this option you can have calibre override any Table of Contents found in the metadata of the input document with the auto generated one. If set to a number greater than zero, at most that number of links is added. This option can also remove paragraphs which were inserted using calibre's insert blank line option. Falls Sie die PDF-Datei auf einem elektronischen Gerät verwenden möchten, dann bietet die PDF-Gliederung diese Funktionalität und wird standardmäßig erstellt. Conversion of these may or may not work depending on just how they are represented internally in the PDF. Paragraphs end when the next line that starts with an indent is reached: This is the first. Next to each option is a button that launches a wizard to help with the creation of basic XPath expressions. This will cause, for example, images to be auto-resized to be fit to the screen in some output formats. Marking chapter headings with a leading # and setting the chapter XPath detection expression to „//h1“ is the easiest way to have a proper table of contents generated from a TXT document. Formatting style: HeuristicAnalyzes the document for common chapter headings, scene breaks, and italicized words and applies the appropriate HTML markup during conversion. calibre has two sets of options for chapter detection and inserting page breaks. This must be enabled in order for various sub-functions to be applied Unwrap linesEnabling this option will cause calibre to attempt to detect and correct hard line breaks that exist within a document using punctuation clues and line length. Beachten Sie jedoch, dass das Konvertierungssystem von Calibre kein Ersatz für einen ausgewachsenen E-Book-Editor ist. Bemerkung There is a demo .docx file that demonstrates the capabilities of the calibre conversion engine. Suppose you want to use an image as your chapter title, but still want calibre to be able to automatically generate a Table of Contents for you from the chapter titles. Bemerkung Using these options can be a little challenging to get exactly right. You should also read Wie konvertiere ich meine Datei mit nicht-englischen Zeichen oder Anführungszeichen? The default way that the creation of the auto generated Table of Contents works is that, calibre will first try to add any detected chapters to the generated table of contents. This option will re-number the heading tags to prevent splitting. You can adjust this value in the conversion settings under PDF Input. In such cases calibre uses the OCRRed text, which can be very different from what you see when you view the PDF file PDFs that are used to display complex text. Like right to left languages and math typesetting will not convert correctly To re-iterate PDF is a really, really bad format to use as input. If you want to edit the input document a little before having calibre convert it, the best thing to do is edit the files in the input sub-folder, then zip it up, and use the ZIP file as the input format for subsequent conversions. There are various transforms, for example, to insert book metadata as a page at the start of the book, to detect chapter headings and automatically create a Table of Contents, to proportionally adjust font sizes, et cetera. Note that this option linearizes all tables, so only use it if you are sure the input document does not use tables for legitimate purposes, like presenting tabular information. Bemerkung You can see the actual settings used during any conversion by clicking the rotating icon in the lower right corner and then double clicking the individual conversion job. It is important to remember that all the transforms act on the XHTML output by the Input plugin, not on the input file itself. Sie können beliebige Kopf- und Fußzeilen auf jeder Seite des PDF einfügen, indem Sie Kopf-und Fußzeilenvorlagen festlegen. Increase to include less. Also, they often have headers and footers as part of the document that will become included with the text. This can sometimes be slightly confusing, as by default, calibre will insert page breaks before detected chapters as well as the locations detected by the page breaks option. If you absolutely must use PDF, then be prepared for an output ranging anywhere from decent to unusable, depending on the input PDF. By default, calibre uses a page size of „U.S. Letter“. The inserted headings are not formatted, to apply formatting use the Extra CSS option under the Look and Feel conversion settings. calibre-pdf-toc table { width: 100% } calibre-pdf-toc table tr td:last-of-type { text-align: right } calibre-pdf-toc level-0 { font-size: larger; } calibre-pdf-toc level-1 td:first-of-type { padding-left: 1.4em } calibre-pdf-toc level-2 td:first-of-type { padding-left: 2.3em } If you are converting an EPUB or AZW3 file with multiple individual HTML files inside it and you want to change the page margins for a particular HTML file you can add the following style block to the HTML file using the calibre E-book editor: @page { margin-left: 10pt; margin-right: 10pt; margin-top: 10pt; margin-bottom: 10pt; } Then, in the PDF output section of the conversion dialog, turn on the option to Use page margins from the document being converted. It also sets the text indent to 1.5em (can be changed) to mark the start of every paragraph. The one exception is when the input file uses hard line breaks to implement inter-paragraph spacing. This can be turned off by the option in the top left corner of the Bulk conversion dialog. Now all pages generated from this HTML file will have 10pt margins. If there are no other headings used in the document then setting „//h:h2“ under Structure detection would be the easiest way to create a TOC for the document. Also, detected chapters can be optionally inserted into the auto generated Table of Contents. tags are used for chapter headings;

tags are used for any titles that are detected. Enable heuristic processingThis option activates calibre's Heuristic processing stage of the conversion pipeline. The four sub-folders are: **Stadien des Konvertierungsprozesses**! **Ordner Beschreibung input** **This contains the HTML output by the Input plugin. For example you can use it to change all green colors to blue, or remove all bold styling from the text or color all headings a certain color, etc. By default, calibre uses the following expression for detecting chapters: /*[(name()='h1' or name()='h2')] and re:test(, 'chapter|book|section|part|(s+), ')) or @class = 'chapter']** This expression is rather complex, because it tries to handle a number of common cases simultaneously. Text can be either justified or not. In addition, you should choose an Input profile and an output profile. Some limitations of PDF input are: Complex, multi-column, and image based documents are not supported. For example, chapters, page breaks, headers, footers, etc. Dies bedeutet das der Großteil des Texts im Dokument eine Größe von 8pt hat, während Überschriften etwas größer sind (beispielsweise 10 und 12pt) und Fußnoten etwas kleiner mit 6pt. Formatting style: Markdowncalibre also supports running TXT input though a transformation preprocessor known as Markdown. If you want to override it you can use the Text justification option in this section. Sie können mit diesen Einstellungen herumspielen um zu versuchen ein Optimum zu finden, indem Sie den Schriftgrößenskalerungsdialog nutzen, auf den über die kleine Schaltfläche neben der Font size key Einstellung zugegriffen werden kann. These options use regular expressions to try and detect headers, footers, or other arbitrary text and remove or replace them. The Page setup options are for controlling screen layout, like margins and screen sizes. Remove spacing between paragraphs forcefully ensure that all paragraphs have no inter paragraph spacing. Ensure scene breaks are consistently formattedWith this option calibre will attempt to detect common scene-break markers and ensure that they are center aligned. Paragraph style: UnformattedAssumes that the document has no formatting, but does use hard line breaks. Sie können dann das bearbeitete E-Book in Calibre als Input für die Konvertierung in andere Formate verwenden. You can remove the saved settings for a group of books by selecting all the books and then clicking the Edit metadata button to bring up the bulk metadata edit dialog, near the bottom of the dialog is an option to remove stored conversion settings. Chapter 2 ... When you convert a book, calibre remembers the settings you used for that book, so that if you convert it again, the saved settings for the individual book will take precedence over the defaults set in Preferences. Successful matches will be highlighted in Yellow. You can see this process in action by using the debug option . Angenommen das Quelldokument, dass wir konvertieren wurde von jemandem mit perfektem Sehvermögen erstellt und hat eine Grund-Schriftgröße von 8pt. These settings are the defaults for the conversion options. Um dies zu erreichen sollte der Schriftgrößenschlüssel wie folgt geändert werden: New font size key : 7, 9, 12, 14, 18, 20, 22 Die größten Überschriften werden nun 18pt groß, während die Fußnoten 9pt groß werden. So if your output profile is set to Kindle, calibre will create a PDF with page size suitable for viewing on the small Kindle screen. In dieser Sektion gibt es noch einige weitere Optionen. Think of it as a way to create your own customised book jacket. This is a regular expression that will match the title of entries in the generated table of contents. Horizontal rules can optionally be specified with styles, if you choose to add your own style be sure to include the „width“ setting, otherwise the style information will be discarded. Just add the file to calibre and click convert. Um E-Books zu bearbeiten, empfehle ich, sie zunächst mit Calibre in EPUB oder AZW3 zu konvertieren und dann die Edit book-Funktion zu verwenden, um sie in eine perfekte Form zu bringen. This allows you to remove all CSS properties of the specified types from the document. Section 1.1 ... The reason for this is that there are often location where page breaks should be inserted that are not chapter boundaries. As you can imagine, this process varies widely from book to book. However, a number of older formats either do not support a metadata based Table of Contents, or individual documents do not have one. Heuristic processing provides a variety of functions which can be used to try and detect and correct common problems in poorly formatted input documents. The exceptions are metadata and input format specific settings. If your input document is not in HTML, use the Debug option, described in the Introduction to get HTML (use the input sub-folder). The file was created from hand coded HTML using calibre and is meant to be used as a template for your own EPUB creation efforts. cp1252 is a common encoding for documents produced using Windows software. calibre will automatically generate a Table of Contents based on headings if you mark your headings with the Heading 1, Heading 2, etc. You can learn more about regular expressions and their syntax at Alles über die Verwendung von regulären Ausdrücken in Calibre. calibre's default conversion settings will cause such titles to be split into two pieces. This often works well: many input documents include a hyperlinked Table of Contents right at the start. When you specify a Base font size, calibre automatically rescales all font sizes in the document proportionately, so that the most common font size becomes the specified base font size and other font sizes are rescaled appropriately. Die Standardeinstellung zur Erkennung von Seitenumbrüchen ist: /*[(name()='h1' or name()='h2')] which means that calibre will insert page breaks before every and tag by default. Justified text has extra spaces between words to give a smooth right margin. Then just select the book you want to edit and click the ToC Editor button. You can also use the ToC Editor by itself, without doing a conversion. Alle diese Einstellungen sind auch über die Befehlszeilenschnittstelle zur Konvertierung verfügbar, wie in ebook-convert dokumentiert. Line height controls the vertical height of lines. Die Font size key option ermöglicht Ihnen einzustellen, wie Schriftgrößen außer der Basisschriftgröße skaliert werden. Vorlagen sind einfach Schnipsel von HTML Code, die an den Positionen von Kopf- und Fußzeile dargestellt werden. If you prefer creating/editing the Table of Contents by hand, convert to the EPUB or AZW3 formats and select the checkbox at the bottom of the Table of Contents section of the conversion dialog that says Manually fine-tune the Table of Contents after conversion. Wenn wir nun die folgenden Einstellungen verwenden: Base font size : 12pt Font size key : 7, 8, 10, 12, 14, 16, 18, 20 Das Zieldokument wird eine Basisschriftgröße von 12pt, Überschriften von 14 und 16pt und Fußnoten von 8pt haben. Then, for chapter two, calibre will take the title from the value of the title attribute on the tag, since the tag has no text. Whenever you try to convert a new book, the settings set here will be used by default. When you convert in calibre you can enter which style you used into the Detect chapters at box. If the document has no table of contents then it will be replaced by empty text. These names are taken from the metadata Table of Contents in the document (the PDF Outline). For example, to remove all entries titles „Next“ or „Previous“ use: The Level 1,2,3 TOC options allow you to create a sophisticated multi-level Table of Contents. By default, it will insert a page break before the chapter. See the Einführung for how to get access to this XHTML. Schematisch läuft eine Konvertierung wie folgt ab: The input format is first converted to XHTML by the appropriate Input plugin. Structure detection involves calibre trying its best to detect structural elements in the input document, when they are not properly specified. It allows you to create entries in the Table of Contents by simply clicking the place in the book where you want the entry to point. Der Schriftgrößenschlüssel gibt an, wie viele „Stufen“ größer oder kleiner als die Basisschriftgröße eine gegebene Schriftgröße sein soll. Also read the XPath-Tutorial, to learn how to construct XPath expressions. The search works by using a Python regular expression. Since the highest priority in Bulk Conversion is given to the settings in the Bulk conversion dialog, these will override any book specific settings. Older documents sometimes don't specify their character encoding. You can replace one tag with another, add classes or other attributes to tags based on their content, etc. Paragraph style: SingleNimmt an, dass jede Zeile ein Absatz ist: This is the first. In general you should avoid using HTML tags, calibre will discard any tags and use pre-defined markup. TOP_LEVEL_SECTION_PAGES - total number of pages in the current top level section TOP_LEVEL_SECTION_PAGENUM - the page number of the current page within the current top level section Bemerkung When adding headers and footers make sure you set the page top and bottom margins to large enough values, under the PDF Output section of the conversion dialog. The comics.txt file must contain a list of the comics files inside the .cbz file, in the form filename:title, as shown below: one.cbz:Chapter One two.cbz:Chapter Two three.cbz:Chapter Three Die .cbz Datei enthält dann: comics.txt one.cbz two.cbz three.cbz calibre will automatically convert this .cbz file into a e-book with a Table of Contents pointing to each entry in comics.txt. You can learn how to customize the detection of chapters in the Struktur-Erkennung section above. As an example, some conversions can leaves behind page headers and footers in the text. Otherwise, choose one of the Generic output profiles. Lines are only unwrapped if the word exists with or without a hyphen in the document. The document itself is used as a dictionary for analysis. All matched text is simply removed from the document or replaced using the replacement pattern. Replace entity indents with CSS indentsSome documents use a convention of defining text indents using non-breaking space entities. Line-unwrap factorThis option controls the algorithm calibre uses to remove hard line breaks. Just specify the path to a folder for the debug output. You should first try with EPUB output. You can restore the individual settings to defaults by using the Restore defaults button in the individual book conversion dialog. The default CSS used is listed below, simply copy it and make whatever changes you like. Calibre (Mac) eBook-Tools „Calibre“ ist ein Gratis-Programm, mit dem Sie auf dem Mac eBooks verwalten, erstellen und konvertieren. Lassen Sie uns ein Beispiel geben. Italicize common words and patternsWhen enabled, calibre will look for common words and patterns that denote italics and italicize them. Paragraph style: PrintAssumes that every paragraph starts with an indent (either a tab or 2+ spaces). Markdown allows for basic formatting to be added to TXT documents, such as bold, italics, section headings, tables, lists, a Table of Contents, etc. In this section you can also tell calibre to embed any referenced fonts into the book. The base font size of a document is the most common font size in that document, i.e., the size of the bulk of text in that document. Some badly designed documents use tables to control the layout of the on the page. When saving as HTML, be sure to use the „Save as Web Page, Filtered“ option as this will produce clean HTML that will convert well. Setting justify-content to flex-end will cause the text to be right aligned. Adjust the XPath under Structure detection if a TOC is not automatically created. For more on encoding issues. You can customize the look of the generated Table of contents by using the Extra CSS conversion setting under the Look & feel part of the conversion dialog. To do this use the Edit meta information dialog to add the ZIP file as a format for the book and then, in the top left corner of the conversion dialog, select ZIP as the input format. If you want to adjust the line heights for some section of the input, it's better to use the Extra CSS. The source HTML it was created from is available demo.zip. On the Convert - TOC page set the Level 1 TOC box to //h:h2 and the Level 2 TOC box to //h:h3. Insert metadata as page at start of bookOne of the great things about calibre is that it allows you to maintain very complete metadata about all of your books, for example, a rating, tags, comments, etc. The Number of links option can be used to control this behavior. If the headers and footers are not removed from the text it can throw off the paragraph unwrapping. Zuerst sollten Sie verstehen, wie der Konvertierungsprozess strukturiert ist. Example image tag (place the image within an 'Images' folder inside the EPUB after conversion): Example horizontal rule with styles: Remove unnecessary hyphenscalibre will analyze all hyphenated content in the document when this option is enabled. Lower this value to include more text in the unwrapping. Some formats convert much better than others. Dies ist sehr sinnvoll, wenn Sie die PDF-Datei auf Papier ausdrucken möchten. Sequences of multiple blank lines will be considered scene breaks and retained as a single paragraph. Das Tool unterstützt neben EPUB- und MOBI-Dateien ... Download Calibre verfügt über ein Konvertierungssystem, das so konzipiert ist, dass es sehr einfach zu bedienen ist. You can even put different content on even and odd pages, for example the following header template will show the title on odd pages and the author on even pages: AUTHOR_TITLE calibre will automatically replace TITLE and AUTHOR with the title and author of the document being converted. Both these options are very comprehensive, removing spacing, or inserting it for all paragraphs (technically and tags). Example: If you mark Chapters with style Heading 2, you have to set the ‚Detect chapters at‘ box to //h:h2 For a nested TOC with Sections marked with Heading 2 and the Chapters marked with Heading 3 you need to enter //h:h2//h:h3. So you should only bulk convert books together that need similar settings. Suppose you have an input document that results in XHTML that look like this:
